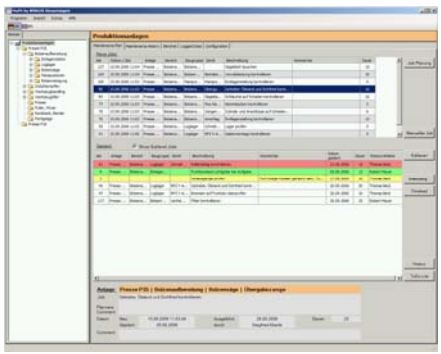
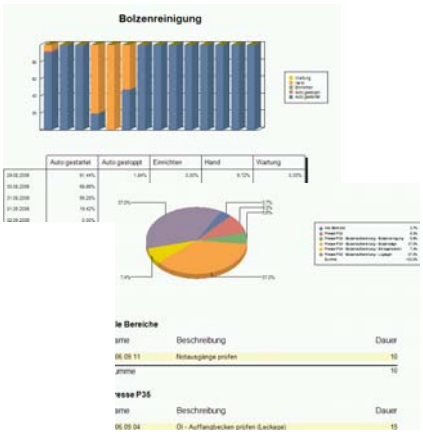
Maintenance Management & Planning System / MaPS

Unforeseen device and machinery faults
often result in expensive loss of production,
reduction of quality and intensive repair works.
With preventive and predictive maintenance
discrepancies can be detected and removed
early, without the risc of a complete standstill.

MaPS helps you by planning and reporting your
maintenance, assists you by early recording of
malfunctions and the documentation of your works.





MaPS:

- preventive /predictive maintenance planning
- user configurable maintenance jobs
- resource planning
- document management and archive
- data logging
- extended archive functions
- detdetailed documentation of your work
- pre-defined, customizable reports

- adjustable to your individual demands
